

DEBRIS CONTAINMENT NETTING

Quins Debris Containment Netting is designed to wrap around buildings, particular installs with **threaded M10 inserts**, enabling installers to easily attach **M10 eye nuts** and secure the **5mm wire**.

The netting overlaps with the fencing, ensuring **100% safety and security** by preventing objects falling onto the streets below.

At the Lendlease site (pictured left), black **19mm x 19mm, 9-ply netting** was used. Installers wrapped it around the outer columns, three floors at a time, for a secure installation.
